Diego Alvarado Orellana

Education

M.S. Human Computer Interaction

Universidad Carlos III de Madrid

2010 - 2011

B.S Electrical Engineering

Universidad Simon Bolivar

2004- 2010 *summa cum laude*

Skills

- TypeScript, JavaScript, HTML, CSS.
- React, Vue, NextJS, Remix, NodeJS.
- UI/UX.
- Focus on accessibility, performance and responsiveness.

Strengths

- I'm a lifelong learner, always eager to learn new skills and technologies. I also enjoy teaching and mentoring.
- I'm detail-oriented, and constantly looking for ways to improve my work.
- Although I enjoy working alone and independently, I also thrive working collaboratively with peers and cross-functional teams.
- My experience working with diverse and multi-cultural teams has given me a sense for out-of-the-box thinking and the ability to find simple solutions to complex problems, or at least make it seem simple for end users.

Front End Engineer

Summary

Software Engineer with 12+ years of experience working in Web and Front-End technologies, with emphasis on accessibility, performance and responsiveness. In the last 4 - 5 years my work has been focused on building web apps with React and NextJS, and building backend APIs with NodeJS.

Experience

Web Engineer - Siri

2019 - Present
Madrid, Spain

Apple

I'm building web apps to support the work of quality engineers and testers to ensure the correct operation of Siri and ultimately impact millions of Apple customers.

UI Software Engineer

2018 - 2019
Madrid, Spain

Expedia Group

- Created web experiences seen by over 100 million people a month.
- Migrated existing BackboneJS code base to React and Node, improving performance and increasing conversion by 10%.
- Leveraged real time user behavior data and A/B testing to better understand customers.

Front End Software Engineer

2015 - 2018
Madrid, Spain

Fonetic

Built the flagship product of the company: a web app to help financial institutions analize and catch fraudulent trading operations.

Research Assistant

2011 - 2015
Madrid, Spain

Universidad Carlos III de Madrid

My research work was oriented at finding new paradigms of Human-Computer Interaction to help children become co-designers of social games.

Software Engineer

2010 - 2011
Caracas , Venezuela

Vikua

Designed and implemented a system capable of connecting traffic cameras and traffic lights together with a remote central via TCP/IP, and built a desktop application to manage the system.
